

BCI Headquarters

Modernity in downtown Maputo

Located in downtown Maputo, the BCI headquarters building in the capital of Mozambique is a modern structure in curved lines that provides harmonious movement to the square in which it is built, and fully matches the local architecture.

The quality of the architectural project, designed by architect José Forjaz, is combined with the excellent construction of an emblematic building that has 10 above-ground floors for offices and 4 underground floors for parking. Its interior contains around 700 work desks organized mainly in *open space*, together with offices, meeting rooms, a training center, technical facilities, an auditorium, a medical center, a gym, two playgrounds, a meeting center, an exhibition space, and two business banking units: BCI Exclusivo and BCI Corporate.

Engexpor carried out the project and works management on this prestigious development in the city of Maputo.
