

## Roads infrastructure of the Colombo Commercial Center

Maximization of accesses to one of the largest commercial references in Portugal

In order to improve the accessibility to one of the largest commercial centers of the Iberian Peninsula, namely Centro Comercial Colombo [or Colombo Commercial Center], several works were conducted on the roads infrastructure around it.

The works included the distribution road around Carnide and Avenida Lusíada [avenue], Avenida do Colégio Militar [avenue], the construction of Avenida da Pontinha [avenue] between the 2nd Circular [expressway] and Avenida Marechal Teixeira Rebelo, and Rua Poente [street].

The works were managed by Engexpor, with its proven experience in the implementation of several roads infrastructure works, many of them associated with the development of commercial centers.
