

Oncoclínicas

Technical assessment of the facilities ensures safety in the network of oncology clinics

We were selected by the Oncoclínicas group to carry out a Technical Assessment of the Building Facilities in all of its 50 units.

The contracting of this service aims to analyze the risks involved in the daily operation of these units and its execution covers a wide range of equipment, such as electrical installations, air conditioning systems, and groups of generators.

Dedicated to the treatment of oncological diseases, the Oncoclínicas group has more than 50 hospitals and clinics throughout the Brazilian territory and is in a phase of full expansion.
