

Bosque Grão Pará Shopping Center

Belém's first sustainable shopping center

Offering a modern architectural design focusing on green areas and in harmony with local culture, the Bosque Grão-Pará Shopping Center gives the city of Belém a dash of modernity, sophistication and innovation. In addition to its extensive commercial range, the shopping mall excels with its spacious and comfortable food court with over 30 restaurants and an excellent view of the Environmental Park.

With sustainability as a goal, the Bosque Grão-Pará Shopping Center prioritizes its excellent relationship with the environment and society. Its construction methods and responsible consumption of natural resources were already recognized as part of Belém's first sustainable shopping center, bringing technology, sustainability, entertainment and fashion together under the same roof.

Strategically located at the junction of Avenida da Independência and Avenida dos Trabalhadores, it neighbors two of the city's finest residential condominiums.

Construction of the shopping center and project management were entrusted to Engexpor.

Learn more about our role in the project in the article from the magazine "Parágrafo" on it, [edition 09/2017](#).
