

Tryp by Wyndham Ribeirão Preto

Construction par excellence in a booming destination

Modern, large-scale architecture, the Hotel Santo Emiliano Ribeirão Preto stands out on the Nova Aliança district skyline, one of Ribeirão Preto's booming destinations, home to the city's major commercial, business and residential centers.

The hotel comprises 13 floors of apartments in addition to 2 underground floors, a ground floor and another floor for services and conference rooms. The 256 spacious apartments are divided into 5 categories – Luxury, Premium, Family, Fitness and Royal Suite – all with a modern, refined environment, state-of-the-art technology and technical equipment.

Built in a constructed area of 25,000 m², the hotel's services are complemented by a covered zone with swimming pool, bar, fitness center and spa, as well as a large area for events and an international restaurant which has already become a local benchmark for culinary excellence.

With façades featuring plastered masonry and glass skin on a large-scale, highly detailed structure, the building required innovative construction and engineering techniques. Project management was the responsibility of Engexpor, which ensured compliance of all the specifications and quality standards through meticulous control of costs and deadlines.

The magazine Predial Brazil [edition 12/2017](#) describes our work in detail, from design to delivery. Read and learn about this benchmark hotel.
